# Marine Autonomous and Robotic Systems at NOC (MARS)

## 1) *Autonomous Underwater Vehicles (AUVs)*

- Autosub3 (1600 m WD)
- Autosub6000 (6000 m WD)
- Autosub LR (6000 m WD)

## 2) *Submarine Gliders*

- 4 x Slocum 200 m
- 4 x Slocum 1000 m
- 4 x Seaglider 1000 m

## 3) *Unmanned Surface Vehicles*

- 1 x Liquid Robotics Waveglider

## 4) *Remotely Operated Vehicles*

- ROV Isis
- HyBIS

- 16 vehicles, increasing to 40 by end of 2014/15
- £10M capital investment in 2013-15

**Autosub Long Range – a new AUV with ultra long range and endurance**

***6000 km, 6 months, 6000 m, 600 kg AUV***

***Across ocean basins, long persistence, seasonal hibernation***

First planned science missions during NERC FASTNet Research Programme in 2014

# AUTOSUB6000

Launch And Recovery System  
Has been fitted to many ships from 18.5 m upwards

5.5 m, 0.9 m diameter, 1800 kg

Acoustic  
Telemetry and  
Tracking System

Collision Avoidance  
System

Lithium Polymer  
Rechargeable  
Batteries.  
28 hour, 150 km  
X 2 in 18 month

Precision Navigation  
(FOG INS + DVL)  
Drift <1 m per 1km

Pumped, Dual CTD  
Also EH, DO, Turbidity  
... + others

3 axis  
Magnetometer

Multibeam Sonar –  
EM2000  
200kHz, 400 m, 2m

Sub Bottom Profiler–  
Edgetech  
2 – 16 kHz

ADCP, 300 kHz  
Current Profiler

2 x High Resolution Colour Camera and Flash System  
(forwards and downward facing)  
15 m range in clear water

Dual Freq. SSS Edgetech  
410 kHz: 250m swath , 0.2 m  
120 kHz: 800 m swath 1m

## High-resolution photomosaics of the deep seafloor at 5000 m WD

- Autosub6000
- >100,000 individual seafloor images
- Largest continuous deep-sea photo
- Automated image recognition required!

# Marine Imaging Workshop

**7-10 April 2014**

**National Oceanography Centre  
Southampton, UK**

## Themes

- Image collection
- Strategies and practicalities
- Processing of images
- Including correction for colour, size, and camera position
- Still image/video annotation
- Annotation strategies for large data sets
- Including automation and crowd sourcing
- Data management

## Important Dates

2 December 2013	Registration and abstract submission open
15 January 2014	Abstract submission deadline
7 February 2014	Abstract acceptances announced
14 February 2014	Registration and photo competition entry deadline
7-10 April 2014	Workshop

For more information or to register go to [marine-imaging-](#)

## UK scientists to probe Pine Island Glacier

By Jonathan Amos  
Science correspondent, BBC News

Jonathan Amos explains how snow tractors, robot subs and seals with sensors will help study the glacier

**UK scientists are about to set out for Antarctica to investigate the mighty Pine Island Glacier.**

The PIG drains about 10% of all the ice sliding off the west of the continent, and has seen a marked thinning and a surge in velocity in recent decades.

## Deepest undersea vents discovered by UK team

By David Shukman  
Science editor, BBC News

David Shukman joins researchers examining the sea bed

**UK scientists exploring the ocean floor in the Caribbean have discovered an "astounding" set of hydrothermal vents, the deepest anywhere in the world.**

### Related Stories

World leading science, and new opportunities for public outreach and education

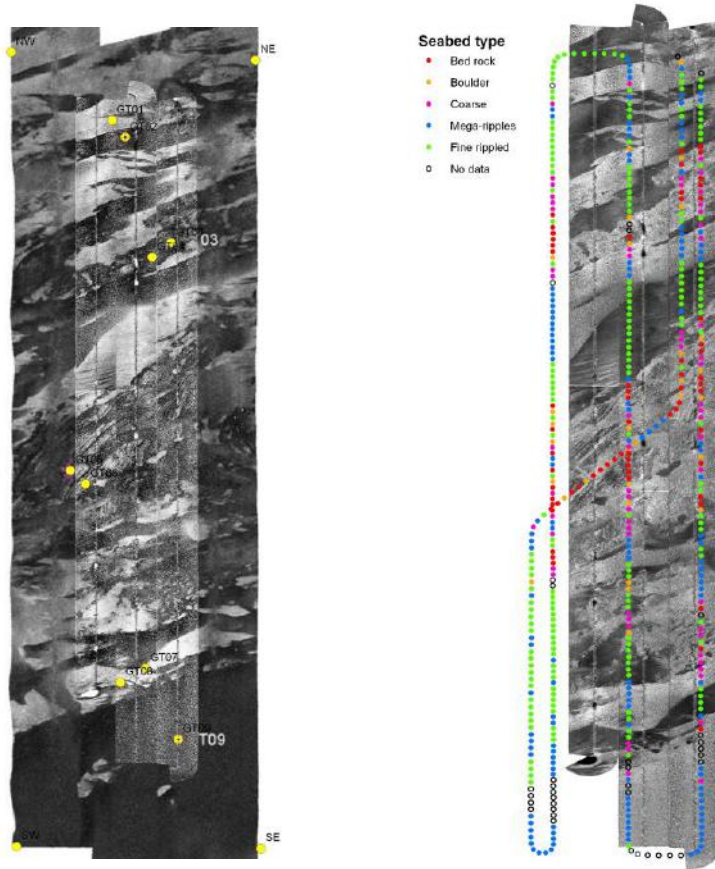

*“We will foster UK and international partnerships so that business, government, civil society and scientists can work together to address the challenges of managing the marine environment ”*

# Shallow-water AUV surveys of the Haig Fras rMCZ off southwest UK at 100 m WD

- High-resolution AUV multibeam bathymetry and sidescan sonar data **compared well** with equivalent vessel-based data from the same area (obtained by Cefas as part of the MCZ evidence programme)
- Autosub6000 also collected valuable water column data and a total of **15,000 full-colour seafloor photos**
- The integrated dataset illustrates the potential of AUVs for producing **ground-truthed habitat maps**
- The site will be revisited in late summer 2014 to assess **natural change** and AUV repeat survey methods

## Submarine gliders for acoustic monitoring

2 x shallow-water Slocum gliders running in tandem  
One month deployment off SW UK in Sept-Oct 2013  
Monitoring of multiple abiotic and biotic parameters

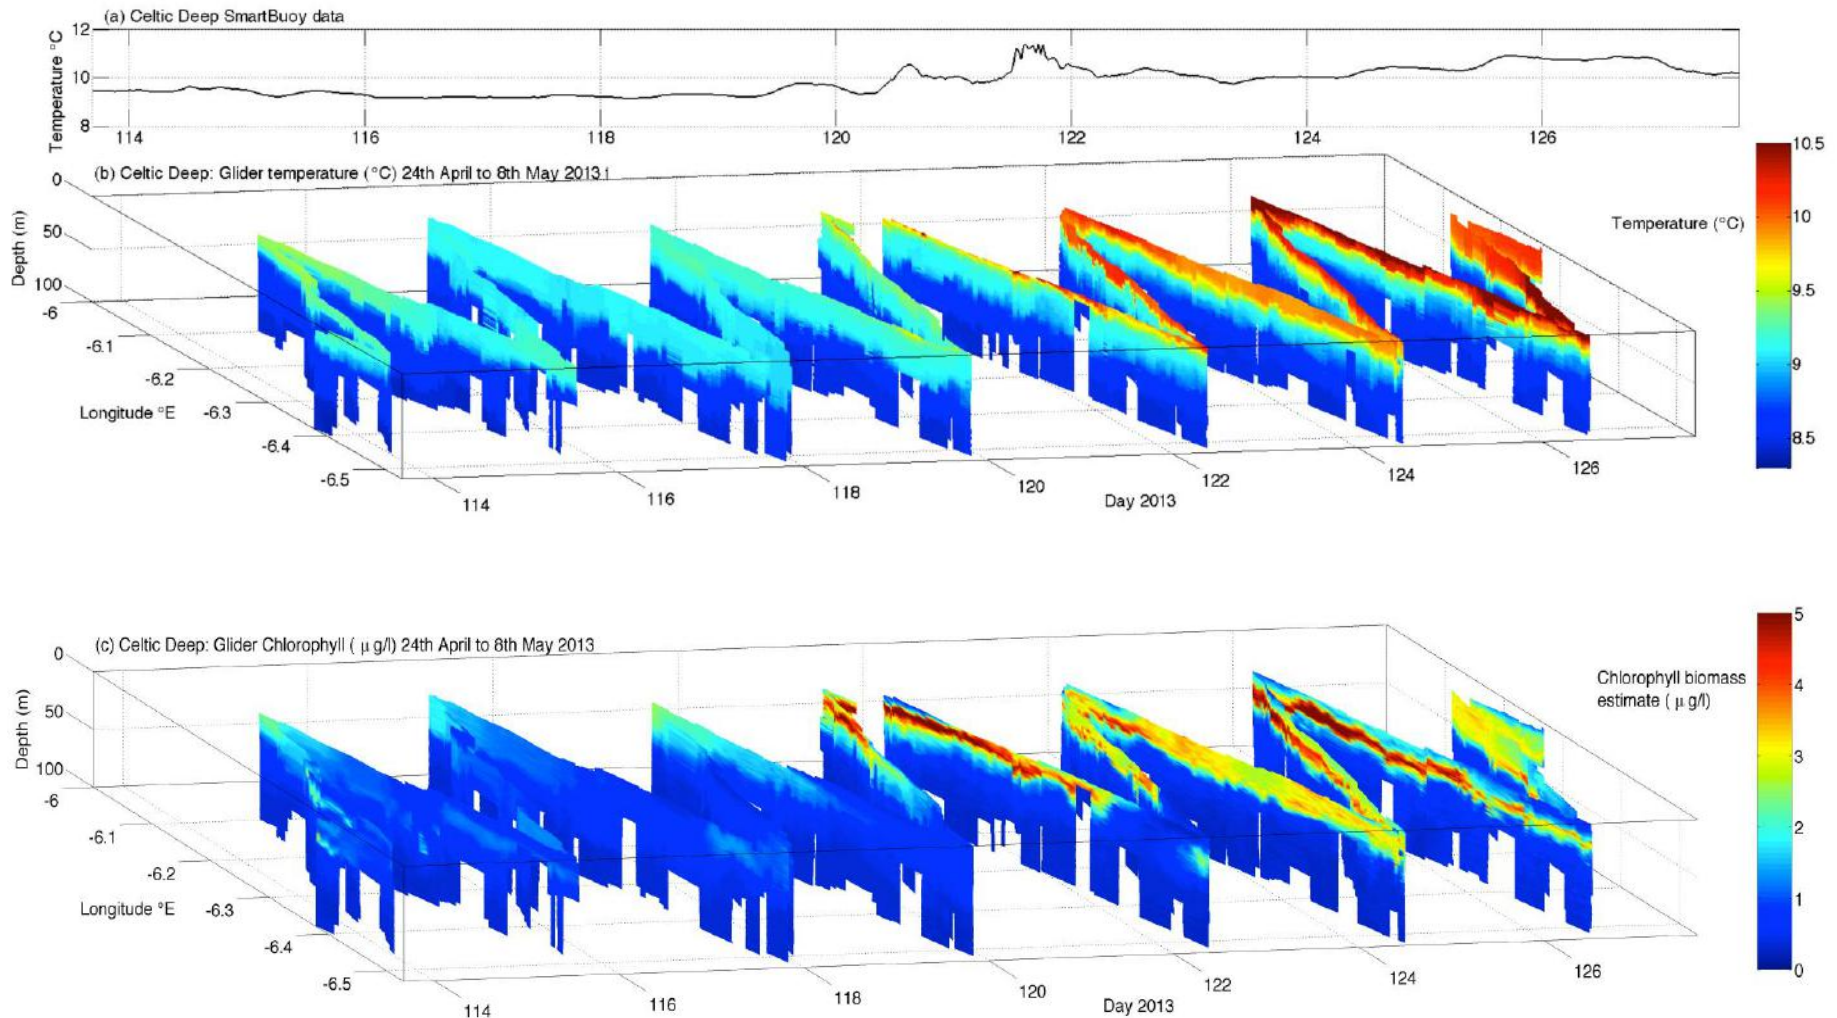

*CTD and fluorometer (abiotic data and phytoplankton)*  
*120 kHz echo-sounder (zooplankton and pelagic fish)*  
*D-TAG Passive Acoustic Monitor (small cetaceans)*  
*Hydrocarbon sensor*

# Shallow-water glider surveys over the Celtic Deep

- Deployment of a NERC **shallow-water Slocum glider** over the Celtic Deep in spring 2013, to monitor onset of density stratification and the phytoplankton response (6 repeat transects in 15 days, measuring T, S, O<sub>2</sub>, Chl, CDOM and Optical Backscatter)

# Sub-seabed CO<sub>2</sub> storage - monitoring leakage and ecosystem impacts

Autosub6000 with Eh, Ph and CO<sub>2</sub> sensor – deployed over Sleipner CCS site in northern North Sea

# Long Endurance Marine Unmanned Surface Vehicles (LEMUSV)

- Small Business Research Initiative (SBRI); focus on UK SMEs
- Funded by TSB, NERC and DSTL, managed by NOC
- Two companies (MOST and ASV) selected to build and test prototypes
- Ideal platforms for upper water column, metocean and acoustic data collection
- Further trials and proof-of-concept studies being undertaken throughout 2014

**MOST 'AutoNaut'**

**ASV 'C-Enduro'**

## Working towards an integrated marine mapping and observing network in UK waters

- Sharing resources and expertise; “doing more for less”
- Tackling legal, technological and operational issues
- Co-funding proof-of-concept studies with partners

*In 10 years the aspiration for MARS is to be able to 1) deploy MAS in any part of the world's ocean, at any depth, 2) use MAS to map and monitor a comprehensive range of marine parameters of importance to science, policy and industry, at the full range of spatial and temporal scales required, and 3) rapidly deploy MAS in response to any marine event requiring urgent monitoring*
